

Ross Solution Projects Limited

CASE STUDY

CAR PARK INSTALLATION

SOUTHAMPTON

During December 2020 and January 2021, Ross Solution Projects (RSP) was busy with a major project at the Marchwood Industrial Park on the outskirts of Southampton. This important hub of business and industry covers 120 acres and is the location for a range of factories, warehousing, offices, scientific facilities and other organisations.

Ross Solution Projects Limited

Suite 111, 116 Ballards Lane
Finchley
Barnet N3 2DN

Marchwood Industrial Park is also the site for a regional branch of one of the UK's leading waste management companies, which appointed RSP to construct a new 500 square metre asphalt car park for members of its staff and visitors to the premises. The project lasted four weeks and involved from between two to 10 men being on site at any one time.

The surface was prepared and levelled using equipment including excavators, dumpers and rollers, while our line marking specialists used laser systems for setting out the 30 required parking spaces. We also installed the special drainage required by the client to allow for the safe disposal of diesel using attenuation tanks.

At RSP we believe that we can claim to have unbeatable experience and expertise in surfacing and marking outdoor facilities ranging from commercial and public car parks to school playgrounds. We are always mindful of the fact that the company car park will frequently be the first impression that visitors will take in about a business.

This Southampton project was completed on time to meet the 4-week schedule and with minimum disruption to the client's operations.

This waste management company now has excellent parking facilities that both staff and visiting stakeholders will appreciate.
